Memory Types

ConversationBufferMemory

- This memory allows for storing of messages and then extracts the messages in a variable.

ConversationBufferWindowMemory

- This memory keeps a list of the interactions of the conversation over time. It only uses the last K interactions.

ConversationTokenBufferMemory

- This memory keeps a buffer of recent interactions in memory, and uses token length rather than number of interactions to determine when to flush interactions.

ConversationSummaryMemory

- This memory creates a summary of the conversation over time.

Memory Types

ConversationBufferMemory

- This memory allows for storing of messages and then extracts the messages in a variable.

ConversationBufferWindowMemory

- This memory keeps a list of the interactions of the conversation over time. It only uses the last K interactions.

ConversationTokenBufferMemory

- This memory keeps a buffer of recent interactions in memory, and uses token length rather than number of interactions to determine when to flush interactions.

ConversationSummaryMemory

- This memory creates a summary of the conversation over time.
